

Malaria still claims nearly 500,000 lives every year, mostly children under five.
That's one child every two minutes

GSK's legacy in fighting malaria stretches back more than 100 years.

We believe that a comprehensive approach to malaria is needed to help scale up use of current control methods, while continuing to invest in the development and use of innovative tools.

We are focused on three key areas to help in our fight against malaria:

-  Innovation in R&D
-  Supporting health workers and strengthening health systems
-  Improving access for interventions against malaria

We know that to be truly successful in tackling global healthcare challenges like malaria we can't do it on our own. That's why we work with lots of different organisations and have recently joined forces with Comic Relief in a new five year partnership to fund programmes on the ground in the worst affected areas.

World Malaria Day
25 April

We're fighting malaria on all fronts

Malaria is caused by parasites spread to people through the bites of infected female mosquitoes.

There are five species that cause malaria in humans. Two of these species pose the greatest threat: *Plasmodium falciparum* is prevalent in Africa and *Plasmodium vivax* in Asia and South America.
